SUMMARY

Full stack developer with own projects running in production. I build React applications on the front end and Node.js APIs on the back end, and I run the infrastructure they sit on: a Linux server on Oracle Cloud, nginx, Git and automated publishing. Before moving into technology I spent **18 years** in logistics, retail, customer support and administration, which is where I learned to work a queue through and to finish what I start.

PROJECTS

Operations Dashboard 2026

HTML, CSS, JavaScript, Python, Bash, nginx, Ubuntu Server (Oracle Cloud), Git

- Production portal on a custom domain, with basic auth and TLS. Deployment is a Bash script that versions assets, runs a smoke test and pushes to the repository in one command.
- Python routines that index activity and publish content from JSON, so recurring output lands in the panel without being written by hand.

Tourism Platform (back end) 2026

Node.js, Express, Prisma, PostgreSQL, MongoDB, JWT, Mercado Pago, Nodemailer

- REST API with JWT authentication and controllers split by domain. Prisma over PostgreSQL with four versioned migrations, and Mongoose for geo-mapping and order origin.
- Payment and QR code through Mercado Pago, with transactional email.

DevBurguer (interface and API) 2026

React, Vite, Material UI, Emotion, React Hook Form, Stripe, Express, PostgreSQL, MongoDB

- Ordering application with a React interface, schema validation and Stripe checkout. Express API with Sequelize over PostgreSQL and Mongoose over MongoDB, plus image upload to Cloudinary.

DevClima and portfolio jonasfilho.dev.br 2026

React Native, Expo, React Navigation, Axios, TypeScript, React 18, Vite, Vercel

- Weather app by geolocation, with tab navigation and an external API. Personal site in production, published on Vercel from GitHub.

EXPERIENCE

Full Stack Developer — JF Dev (self-employed) 12/2025 – present

- Build and maintain the projects above, from requirement to publication.
- Versioning in Git with history organised per project, and deployment automated from the repository.

Systems Support Technician — Supermercado Teixeira Coelho 03/2020 – 05/2024

- First-level support for the management system at the checkout counter and in the back office, resolving incidents that affected service.
- Entry and organisation of the product database, which cut the time spent serving customers at the till.
- Tuning of the service flow to shorten the customer queue.

Inventory Checker and Flow Lead — Companhia Brasileira de Distribuição (CBD) 03/2009 – 05/2018

- Stock checking and control on receiving and dispatch, applying the FIFO method.
- Led operational teams in warehouse organisation.

Office Assistant — New Chroma Comercial 02/2005 – 12/2008

- Document organisation and support to the purchasing department.

EDUCATION

- **Computer Science** — UNOPAR (distance learning), in progress since 07/2023
- **Full Stack Programmer** — DevClub, in progress
- **Technical Certificate in Logistics** — ETEC Paulo Eiró, 2011 – 2012
- **Secondary Education** — E.E. Ministro Costa Manso, 2003

CERTIFICATIONS AND COURSES

- Google Cloud Computing Foundations — BigQuery, Cloud Computing and AI / Machine Learning fundamentals
- Google Arcade Facilitator
- Excel from basic to advanced, and Administrative Assistant — BraSTEC, 2025

TECHNICAL SKILLS

Front end	React, React Native, Expo, Vite, JavaScript (ES6+), HTML5, CSS3, Material UI
Back end	Node.js, Express, REST APIs, JWT authentication, Prisma, Sequelize, Mongoose
Databases	PostgreSQL, MongoDB, relational modelling, versioned migrations
Infrastructure	Ubuntu Server, Oracle Cloud, nginx, systemd, Git and GitHub, automated publishing, TLS certificates
Cloud	Google Cloud Platform, Google Cloud Computing Foundations
Tools	Linux, Python, Bash, advanced Excel, agile methods, SEO
