PROFILE

Junior Full Stack Developer with hands-on experience building and publishing web and mobile applications. I work with React, Node.js, Express, PostgreSQL, MongoDB and REST APIs, and I configure the Linux servers, nginx, Git and deployments on Oracle Cloud and Vercel behind them. My own projects run in production with JWT authentication, payments, transactional email, image storage and automated deployment. I also bring 18 years of operations, customer support, administration and logistics work, with strong problem-solving, organisation and follow-through.

LANGUAGES

Portuguese	Native
Spanish	B2 — reading and writing fluent; live conversation in progress
English	B2 — reading and writing; technical conversations in writing

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Front end	React, React Native, Expo, Vite, Material UI, Emotion, React Hook Form
Back end	Node.js, Express, REST APIs, JWT authentication, Prisma, Sequelize, Mongoose
Databases	PostgreSQL, MongoDB, relational modelling, versioned migrations
Infrastructure	Ubuntu Server, Oracle Cloud, Vercel, nginx, systemd, Git and GitHub, automated deployments, TLS certificates
Cloud	Google Cloud Platform, Google Cloud Computing Foundations

Tools Linux, Python, Bash, Stripe, Mercado Pago, Cloudinary, Nodemailer, advanced Excel, agile methods

PROJECTS

Operations Dashboard — production panel 2026

HTML, CSS, JavaScript, Python, Bash, nginx, Ubuntu Server (Oracle Cloud), Git · public demo

- Production portal on a custom domain, with basic auth and TLS. Publishing is automated by a Bash script that versions assets, runs a smoke test and pushes to the repository in one command.
- Python routines that index activity and publish content from JSON, so recurring output reaches the panel without being written by hand.

Tourism Platform — REST API 2026

Node.js, Express, Prisma, PostgreSQL, MongoDB, JWT, Mercado Pago, Nodemailer

- REST API organised by domain, with JWT authentication and four versioned Prisma migrations over PostgreSQL.
- Geospatial persistence with MongoDB/Mongoose, payment and QR code through Mercado Pago, and transactional email with Nodemailer.

DevBurguer — ordering application 2026

React, Vite, Material UI, Emotion, React Hook Form, yup, Stripe, Express, Sequelize, PostgreSQL, MongoDB, Cloudinary · code

- React interface with schema validation and Stripe checkout; Express API with Sequelize over PostgreSQL and Mongoose over MongoDB.
- Image upload to Cloudinary with Multer, and authentication with JWT and password hashing.

DevClima — weather application 2026

React Native, Expo, React Navigation, Axios, TypeScript · code

- Weather app by geolocation, with tab navigation and an external API.
- Personal site jonasfilho.dev.br in production, published on Vercel from GitHub with React 18 and Vite.

EXPERIENCE

Full Stack Developer — self-employed 12/2025 – present

JF Dev

- Build and maintain the projects above, from requirement to publication.
- Versioning in Git with history organised per project, and deployment automated from the repository.

Systems Support Technician 03/2020 – 05/2024
Supermercado Teixeira Coelho

- First-level support for the management system, at the checkout counter and in the back office, resolving incidents that affected service.
- Entry and organisation of the product database, and tuning of the service flow to shorten the customer queue.

Inventory Checker and Flow Lead 03/2009 – 05/2018
Companhia Brasileira de Distribuição (CBD)

- Stock checking and control on receiving and dispatch, applying the FIFO method.
- Led operational teams in warehouse organisation.

Office Assistant 02/2005 – 12/2008
New Chroma Comercial

- Document organisation and support to the purchasing department.

EDUCATION

- **Computer Science** — UNOPAR (distance learning) · In progress, started 07/2023
- **Full Stack Programmer** — DevClub · In progress
- **Technical Certificate in Logistics** — ETEC Paulo Eiró, 2011 – 2012
- **Secondary Education** — E.E. Ministro Costa Manso, 2003

CERTIFICATIONS AND COURSES

- Google Cloud Computing Foundations — BigQuery, cloud computing and AI / machine learning fundamentals
- Google Arcade Facilitator
- Excel from basic to advanced, and Administrative Assistant — BraSTEC, 2025

Production projects and public code are at the links above. I do not list Docker, automated tests or CI/CD because my repositories do not include them.
